EDUCATION

York University

Toronto, Ontario

Bachelors of Science (Honours) in Computer Science

Apr 2026

Relevant Coursework: Data Structures and Algorithms, Computer Hardware, Cyber Security, Object-Oriented Programming, Embedded Systems, Database Management, AI and Logic Programming

EXPERIENCE

Estée Lauder

Markham, Ontario

Set up Attendant

Oct 2025 – Present

- Reconciled material usage and inventory data across 200+ production runs per week using SAP, maintaining 100% accuracy in cost and process order records.
- Served as the primary point of contact for SAP process order and system discrepancies, resolving 40+ issues per month and cutting reporting delays by a significant amount
- Partnered with warehouse and production teams to identify and correct inventory and material discrepancies, reducing reconciliation errors and avoiding issues reaching consumers.
- Standardized post-production documentation workflows, reducing paperwork processing time by a significant amount.
- Supported cost analysis reporting by maintaining accurate material consumption records used in monthly variance reviews.

Scale AI

Remote

AI Trainer

Sep 2025 – Present

- Evaluated and annotated 51,000+ AI model outputs across coding and technical domains, improving model accuracy and reasoning quality significantly.
- Applied domain expertise in programming and software concepts to assess response correctness, clarity, and technical soundness under strict quality guidelines.
- Maintained a 93% quality/consistency score across large volumes of annotation tasks in a deadline-driven, remote workflow.

PROJECTS

BeyBazaar

Feb 2025 – Present

Python | Flask | HTML | CSS | JavaScript

- Built and operated a production-grade e-commerce platform end-to-end, managing catalog, order workflows, and logistics while achieving sub-200ms TTFB.
- Applied SEO and analytics strategy that drove ~1.5M impressions and \$500+ revenue within 3 months, tracking performance to guide inventory and pricing decisions.
- Managed vendor sourcing, shipping logistics, and order fulfillment operations alongside the technical build, mirroring end-to-end supply chain coordination.

MapFlow

Jan 2025 – Feb 2025

Python | Flask | HTML | CSS | JavaScript

- Built a pathfinding and route-optimization platform (Dijkstra, A*, BFS, DFS, bidirectional search) modeling efficient path selection across large network graphs.
- Optimized system performance through stateless serverless architecture, compression, and cached data handling, cutting load times by 70%.

YeezyDB

Apr 2024 – May 2024

Python | Flask | HTML | CSS | JavaScript

- Built an automated data pipeline that scraped, structured, and stored product inventory data in PostgreSQL, powering a CRUD app to track and manage 200+ inventory records.
- Designed a normalized PostgreSQL schema to store structured sneaker metadata and images, enabling efficient querying and CRUD operations across the collection.

SKILLS

Operations & Analysis Tools: SAP, Excel, SQL, Process Order Reconciliation, Cost Analysis, Inventory Management

Programming Languages: Python, SQL, JavaScript, TypeScript, Java, Dart, C, HTML/CSS

Frameworks & Libraries: Flutter, React.js, Next.js, Flask

Tools & Environments: Git, Docker, Firebase, Firestore, VS Code, Windows, Linux
